

THE DEVELOPER COMMUNITY, REIMAGINED

# A new home for people who build.

CodingWall is a planned developer community for sharing projects, learning through practice, and finding collaborators and opportunities.

**A founding opportunity.** We are inviting developer tools, education businesses, and hiring teams to explore partnerships before the platform launches.

## The platform vision

### Projects & feedback

Share demos, repositories, and the decisions behind the code.

### Developer profiles

Bring work, skills, and progress into a profile people can explore.

### Practical learning

Connect learning paths and coding challenges to finished projects.

### Community & collaboration

Discuss problems, give useful feedback, and find contributors.

### Mentorship & build events

Develop programs that help people practice and keep building.

### Tools & opportunities

Explore future developer resources and career opportunities.

## Who we want to bring together

Students, self-taught developers, professional engineers, open-source contributors, and people building side projects. The platform will focus on practical participation and work people can share.

**Current stage: pre-launch.** Community capabilities are planned and may change with feedback. We do not claim an existing member base, traffic figures, active sponsor relationships, or guaranteed reach.

## PARTNERSHIP MODELS

# Support the next chapter.

Choose an activity that fits your goals. Scope, deliverables, budget, and timing are agreed directly before commitment.

| Founding partner                                                                                                     | Community program                                                                                                                                  | Product partner                                                                                                                                  |

| Support the platform launch.<br><br>Discuss launch recognition, a partner profile, placements, and a review process. | Support practical participation.<br><br>Co-design a challenge, workshop, or resource. Define the participant experience and review actual results. | Introduce a useful developer tool.<br><br>Explore a clearly disclosed tutorial, tool introduction, or community benefit with an agreed use case. |

## How a partnership develops

- 01 **Start with your goal.** Share your company, intended audience, and any constraints on budget or timing.
- 02 **Agree a written proposal.** Define deliverables, responsibilities, disclosure, metrics, and the review process.
- 03 **Prepare the activity.** Confirm resources and launch readiness before the agreed program or placements begin.
- 04 **Review actual results.** Use the available reporting to decide what should happen next.

**Clear expectations.** Partnership formats are proposals for discussion. Sponsored involvement will be identified. Any reporting uses actual available results; no audience size or reach is guaranteed.

## Start the conversation

Tell us what your company wants to support, the collaboration you have in mind, and any timeline or budget you want us to consider.
